

AI Deepfake Analyzer Report

The analysis is inconclusive.

Verdict: inconclusive with low confidence. Estimated AI probability is 43%; manipulation probability is 44%. Review the evidence layers before taking action.

Verdict	inconclusive
Confidence	low
AI Probability	43%
Manipulation Probability	44%
Detector Disagreement	13%

Evidence Layers

Input and Source - complete

- Image dimensions: 1254 x 1254.
- Input source: direct upload.

Metadata - complete

- No EXIF metadata found.
- No GPS metadata was exposed.
- No software marker found.

Provenance - unavailable

- No c2patool/c2pa executable was found on PATH.

Hashes - complete

- SHA-256: 177744e22338c19c4c48efce079b88ef107c6b851f13039cde940bf4c590ca25.
- Perceptual hash: e7c3fbf7f7d30000.

Compression and Noise - complete

- Manipulation heuristic score: 0.44.
- Artificiality heuristic score: 0.0392.

Detector Ensemble - complete

- metadata_provenance: inconclusive (ok).
- compression_noise_forensics: no_strong_forensic_signal (ok).
- open_source_image_model: not_configured (unavailable).

Limitations

- Image authenticity cannot be proven from pixels alone.
- Social platforms often strip metadata, so missing EXIF is not proof of AI generation.
- No login scraping, private account access, face-search, or private identity inference was performed.

Technical Appendix

SHA-256: 177744e22338c19c4c48efce079b88ef107c6b851f13039cde940bf4c590ca25

Average hash: e7c3fbf7f7d30000

Difference hash: 3369491919c8cc31

Runtime: 854.67 ms
